Airzone Lite

Airzone Lite thermostat with capacitive buttons and a LED RGB light code

✓ VAF, ZBS and Easyzone Systems

Available in: 

If the status LED is steady

The zone in which the thermostat is located is on.

If the status LED is blinking

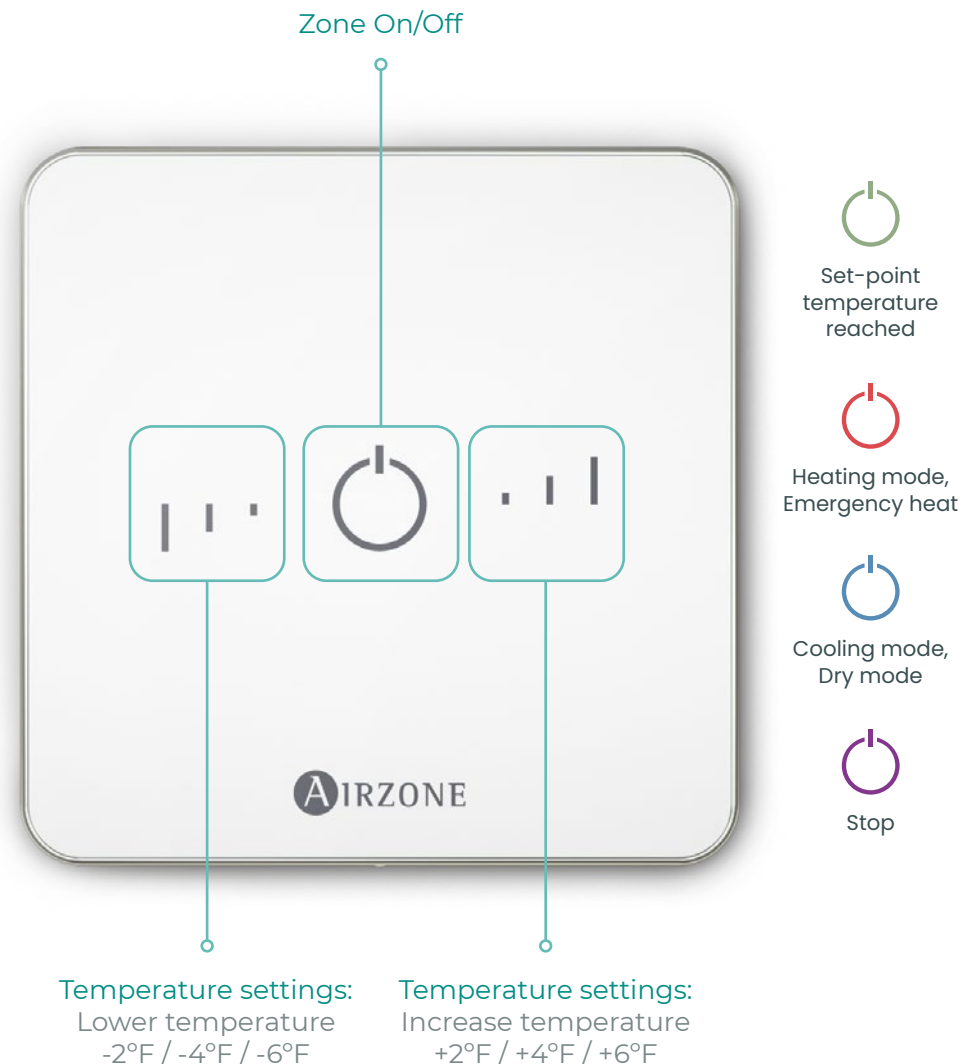

If the LED blinks slowly, it means that the zone in which it is located is off. It can be turned on again by pressing the LED or from remote zones.

If the LED blinks rapidly in red or purple, it means that there is an error. You can check this on the Airzone Blueface or using the Airzone Cloud app.

If the status LED is off

The thermostat is in energy saving mode. In the case of the Airzone wireless Lite thermostat, this will happen by default. If it is a wired Lite thermostat, you can configure this parameter in *Lite settings* through remote zones from your Airzone Blueface thermostat or using the Airzone Cloud app.

The set-point temperature is the desired temperature. The default base temperature is 73°F and configured from the *Lite settings* parameter through remote zones from your Airzone Blueface thermostat or using the Airzone Cloud app.

— Capacitive icons (touch screen)

For more information, you can consult the manuals at www.airzonecontrol.com/support/
