

# Zoned Climate Control Solutions for High Performing Homes

## AIRZONE VAF EASYZONE

Airzone's integrated zoning solutions, designed for Inverter/VRF units, blend the efficiency of HVAC technology with the comfort of tailored zoning control. By integrating a unique library of manufacturer-specific communication protocols, these solutions ensure seamless operation with the HVAC unit, adjusting the performance of the unit to the precise needs of each zone.

This integration achieves an optimized control of the zones with minimum energy use. Moreover, Airzone control solutions function as an integration gateway, facilitating effortless connectivity with Smart Home and Building Management Systems for advanced control and automation.

Independent  
temperature  
control per zone

Up to 53%  
energy  
savings

Manufacturer-specific  
communication protocols  
for 90+ HVAC brands

Integrates with major  
Home Automation  
systems

## A ZONING SYSTEM FOR HIGH PERFORMING HOMES

Airzone VAF is a zoning application designed for Inverter / VRF ducted AC units, that offers an unmatched ability to adapt to a wide range of residential project requirements. It provides consistent comfort in every zone thanks to the combined control of AC and underfloor heating / cooling elements.

By integrating VAF into Home Automation systems, users can enjoy precise temperature control for each zone through a single, unified interface, enhancing both convenience and efficiency.

unit compatibility here

**1** A thermostat per zone  
AC and heating  
combined control.

**2** Auxiliary heat control  
Compatible with radiant,  
baseboard and hydronic heating.

**3** Motorized round  
dampers  
Sizes available:  
6", 8", 10", 12" and 14".

**4** Main board  
With manufacturer-specific  
communication gateway.

**5** Control via Home Automation  
and BMS

and more

**6** Compatible  
with horizontal,  
vertical and  
multiposition units.

## SUPERIOR COMFORT AND LOWER COSTS IN COMMERCIAL APPLICATIONS

Airzone's Easyzone zoning kit is composed of an insulated plenum box that includes assembled motorized dampers, a control board with a communication gateway, and a neck that perfectly fits each indoor unit model, as it has been designed and adapted for each unit model. All components, besides thermostats, are already pre-wired. All designed to streamline installation and reduce costs, while improving comfort per zone.

unit compatibility here

Compatible with:

DAIKIN

LG

MITSUBISHI  
ELECTRIC

SAMSUNG

HITACHI

FUJITSU

TOSHIBA

1 A thermostat  
per zone

2 Plenum box  
With pre-wired motorized dampers, a control board with communication gateway, and a unit specific neck per AHU model, for a tailored fit to the AC horizontal unit.

3 Compatible with  
horizontal units

4 Control via Home Automation and BMS

LUTRON

CRESTRON

Control4

SAVANT

Nice

and more

No bypass damper required |
